Understanding the Concept of Integrated Analysis in Building Design

Definition and Scope

Integrated analysis in building design refers to the simultaneous examination and coordination of all building systems during the planning and drafting phases. Unlike traditional sequential workflows—where structural, MEP, and architectural designs are developed independently and then integrated—this approach emphasizes a collaborative process that considers interdependencies from the outset.

The scope of integrated analysis encompasses:

- Structural integrity and load distribution
- Mechanical systems such as HVAC (Heating, Ventilation, and Air Conditioning)
